

ZONAR[®]

**Shift your state or
local fleet into higher
gear with smarter fleet
management tech.**

Bring out the best in your fleet.

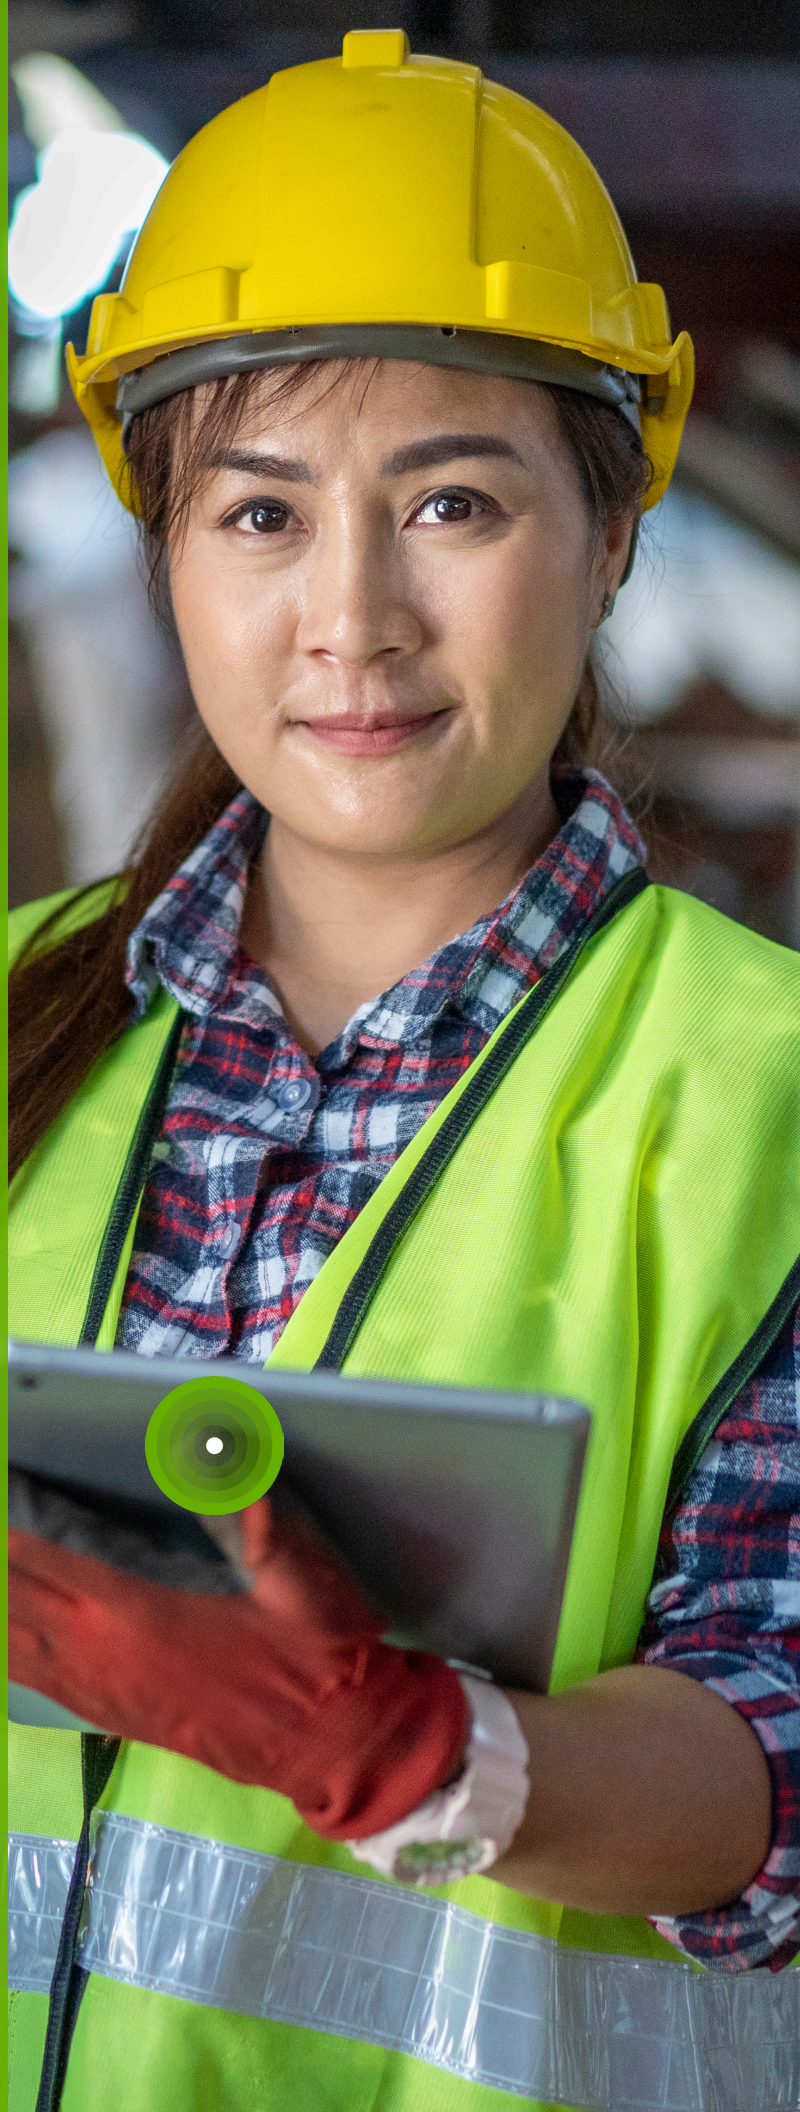

Managing a state or local fleet means ensuring reliability, safety and efficiency. All while controlling ever-changing costs and maintaining compliance with regulations, policies and procedures. A tall order, no matter the fleet's size.

Your fleet management tech should work with you, not against you.

As should your fleet management tech provider.

Know your fleet inside and out with real-time visibility across each vehicle, asset, location, department and agency. Cut fuel and maintenance costs with insights pulled directly from each vehicle's engine. And reduce risk with AI-powered driver safety solutions—all on one platform that frees you up to focus on the job at hand.

Work with a provider who actually listens and supports every solution they offer, even after hours. Serve your community knowing your fleet is optimized, compliant and ready for just about anything.

Miss nothing with proven verified inspections.

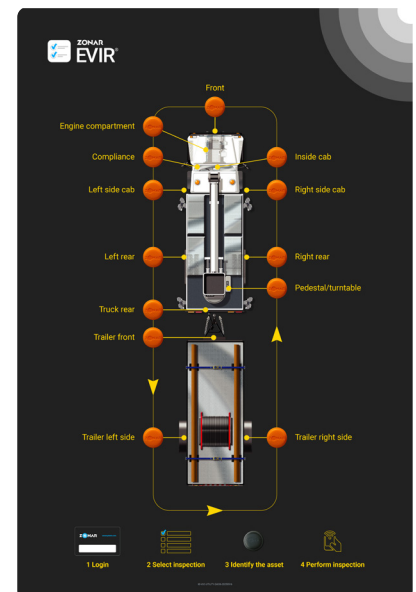

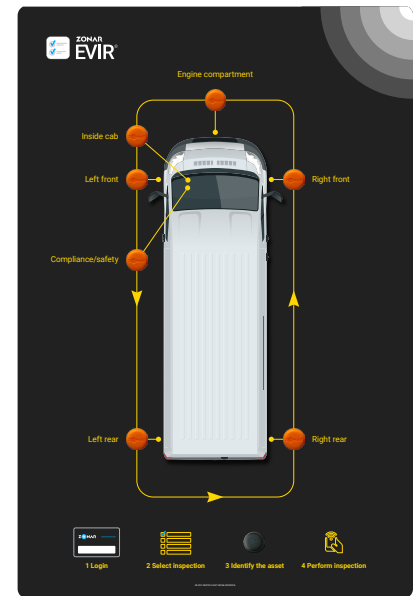

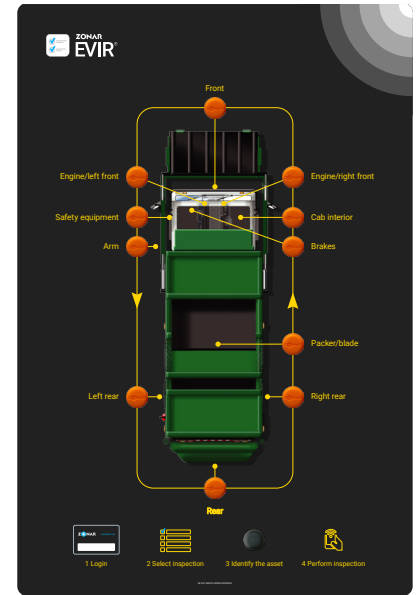

Overlooking defects gives them time to grow worse and more expensive. Digitizing, standardizing and verifying each inspection online gives issues no room to hide. And you more peace of mind.

Catch and address wear more defects, faster, with the proven Zonar EVIR®.

Support all vehicle and asset types, makes, models, years, upfits and specializations.

- Equip drivers with an inspection app and access to approved configurations.
- Create custom configurations to match your fleet, policies and requirements.
- Use EVIR's Inspection Builder tool to tailor inspections for any size, type and specialization of vehicle.
- Verify each inspection online, as soon as the results are uploaded for review.
- Strengthen audit trails with driver association and compliant digital records.
- Integrate with your maintenance platform to streamline the workorder process.

No skips, misses or pencil-whips.

Operate with full, fleetwide visibility.

Managing a state or local fleet's mix of numerous vehicle and asset types takes a flexible tracking option, especially for high-value, non-powered assets.

Stick a small, compact, unassuming Zonar ZTrak® device to almost any asset and track it almost anywhere, whether in motion or fixed in place.

Maximize utilization across more assets for greater inventory control. Protect against loss and theft. Reduce disruptions, replacement costs and reliance on rentals.

Also add leased and rented assets to your fleet visibility, no matter how temporary.

Unlike personal trackers, ZTrak is built for unfriendly conditions and unfriendly, theft-like intentions.

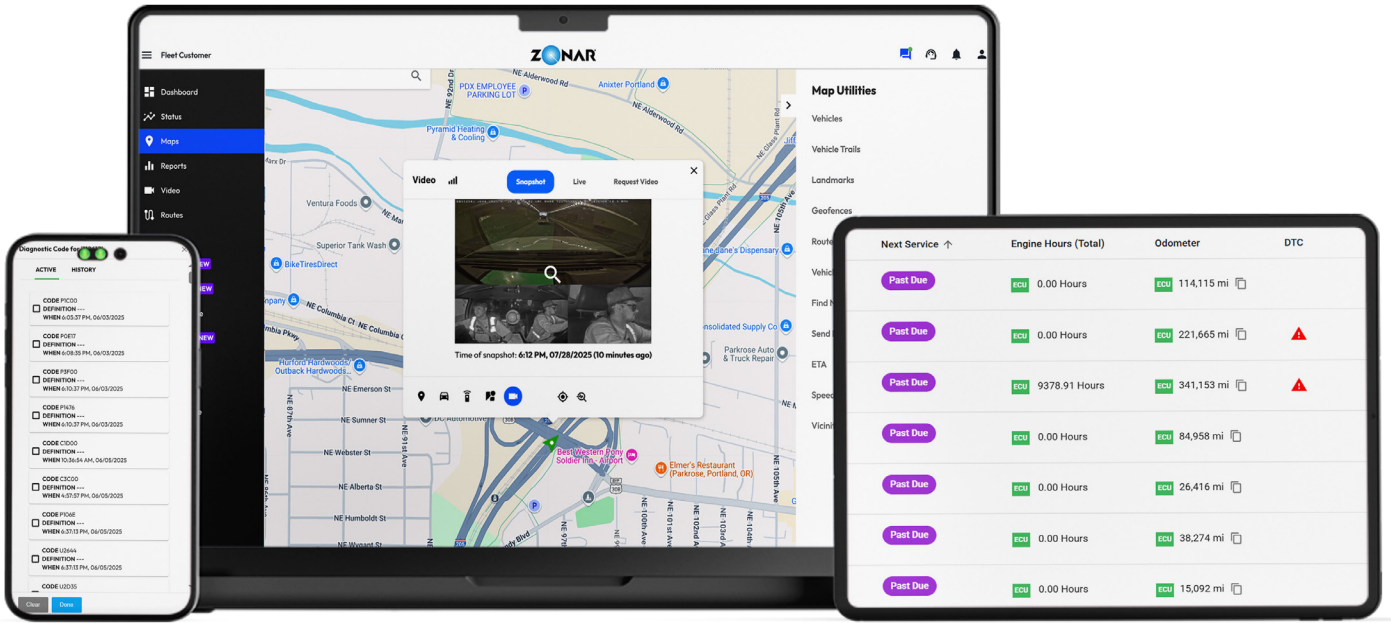

These ruggedized devices are IP67 rated and operate in -22°F to 140°F temperatures. Perfect for remote locations, long deployments, and everyday tracking anywhere you put the asset.

Track an asset for up to 10 years (1 or 2 pings daily). Or remove and attach the ZTrak device to another asset—in minutes.

No tools, no downtime, no damage left behind.

The ZTrak's small, unassuming design makes the device difficult for thieves to notice. And easy for you to enhance high-value asset security.

Should the tracked asset go missing anyway, activate Theft Recovery Mode to remotely track lost and stolen assets at a faster ping rate.

- Location tracking
- Driver association
- HoS compliance

- Essential diagnostics
- Inspection records
- Custom reports

- Activity & performance
- Camera footage
- Compliance & trends

- Fuel use & idling
- Driver behavior
- PTO usage

See all, know all and manage it all from one platform.

People rely on your fleets. You need fleet tech that shows what's going on under your fleet's hood—reliably and efficiently.

As in, with one, integrated fleet management platform. Such as Zonar Ignition™.

Monitor and manage every vehicle, asset and non-powered-but-let's-never-lose-it piece of equipment.

All types, makes, models and years.

Handle daily operations and advanced planning with real-time insights, reports and details from a single source of truth. Know how your fleet operates and performs with visibility across locations. Online, in real time.

Integrate other fleet technologies for added efficiency.

Inform decisions with data that paints a vivid picture.

Decisions made without current, reliable fleet data may as well be guesswork. Ignition pulls data directly from each Zonar-enabled vehicle and asset for real-time insights to inform your next move.

Know what's located where and how effectively it's utilized.

Plan replacements and inventory changes based on current needs and historical trends.

Ensure you have the necessary fleet assets to support seasonal and emergency playbooks. And inform those playbooks with insights regarding what's been deployed, missing or not needed.

Spot gaps in emergency readiness with accurate inventories of kits, equipment and specialized vehicles, especially for first responders.

Support budget requests based on accurate, real-world inventory levels, locations, utilization and fuel usage rates.

The possibilities are endless, but this page isn't. Contact us to learn more.

Protect your fleet with facts and footage.

Guard against scams, mistaken witnesses and nuclear verdicts. On-board telematics tech captures and streams real-time, detailed location and activity data directly from the vehicle.

AI-powered cameras activate when they detect specific unsafe events, and capture HD footage of what occurs, with context. Add external cameras to catch more, from more angles. Imagine exonerating your garbage truck or street sweeper drivers by proving they're not the ones who hit the parked car.

Together, you have an on-demand picture of events unfolding. And how much responsibility your driver may (or may not) own.

"The success of capturing high-definition footage of any safety incidents have been able to help MasTec with false insurance claims and legal expenses."

-Southwest Division Fleet Manager, MasTec

When the proof is in the footage, hearsay loses its star witness power.

Exonerate drivers against false claims, citations and concerned callers.

Mitigate your fleet's liability in the event of an accident or incident.

Enhance safe driving across every state and local fleet.

Show communities that serving them safely is a fleetwide priority.

Procure advanced fleet tech, faster.

Going through a co-operative instead of the RFP process is faster, simpler, more cost effective, and reduces the risk of a non-compliant purchase.

Because Zonar is a Sourcewell contracted supplier, Sourcewell members have access to a catalog of our fleet management technology at lower costs. Plus, as a Zonar customer, you'll have access to our 24/7/365 customer support.

- Telematics and tracking
- Fleet management
- Vehicle health
- Asset tracking
- Camera and driver safety

About Sourcewell

Sourcewell is a member-owned cooperative that helps more than 50,000 organizations, agencies and businesses like yours skip the long bidding process and buy directly from awarded contracts.

Less paperwork, less hassle, and more time (and money) saved.
