

Customize
inspections to
meet fleet needs

Create
configs for more
than the basics

Conduct
proper inspections
across asset types

Comply
with policies &
best practices

Tailor each inspection to fit like a glove.

Standardize and verify every inspection, for every asset.

No detail should be overlooked when everyone's on the same page. EVIR® Mobile comes with pre-built configurations for standard, compliant pre- and post-trip inspections across popular fleet vehicle types. But no two fleets are the same—and flexibility matters. If your fleet needs unique configurations, build and customize your own using Inspection Builder, a feature within EVIR® Mobile.

- Modify tag placements and zone numbers for each inspection type.
- Edit, move, remove or rename inspection zones and their components.
- Create additional inspection types outside of pre- and post-trip inspections.

Create the inspection types you need, as detailed as you need.

- Name each inspection and provide a short description for operators.
- Display required fields such as odometer, route number, shipping document, and more.
- Define which asset or zone tags must be scanned.
- Display dropdowns for defect components or route types.

You can also include timecards for payroll, fuel levels and receipts, and sanitization requirements. Plus, perform standalone deep dives on specific components like tires and brakes.
