

### Comply

with DOT, OSHA,  
MSHA & PTASP

### Ensure

accurate, verified  
inspection reports

### Reduce

risk of failures  
on the road

### Automate

service scheduling  
& reporting

## Tag, inspect, upload. It's that simple.

### Ensure every inspection is done right.

Put EVIR in each driver's hands to automate and simplify pre- and post-trips inspections. And make sure each inspection is done properly—every time. Available on Zonar tablets and by downloading the app from the app stores, our [electronic verified inspection reporting \(EVIR\)](#) solution is compliant with all DOT, OSHA, MSHA and PTASP regulations.

### Prevent pencil whipping and lost logs.

- Place a Zonar tag at each inspection zone on the vehicle.
- Drivers must physically visit each zone and scan each tag.
- Once the inspection is finished, the results are uploaded to our secure Zonar Ignition™ platform.

Each tag is digitally linked to the vehicle to confirm identity, and its corresponding information is automatically loaded. Drivers can review previous inspections, complete full inspections, add photos of defects, and sync with Zonar Ignition™ for anytime, anywhere access—no paperwork to track or lose.

Each scan is time-stamped, so you can see when an inspection begins, ends, and how long the driver spent in each zone. If any part of an inspection was rushed, you'll know.

### Streamline audit inspections.

Daily vehicle inspection records must be held for 90 days. When drivers complete an EVIR inspection, the results are automatically uploaded and digitally stored in a centralized online dashboard. Less administrative paperwork, more efficient inspection audits, fewer penalties due to lost records.

## Maintain vehicle health, reduce risk of breakdowns.

Keep vehicles mechanically safe and in reliable working condition longer. Identify and address critical defects sooner, before they worsen.

Your fleet management and maintenance team is instantly notified when a defect is found during an electronic verified inspection. Address critical issues faster instead of waiting for paper forms to be submitted and routed. Schedule maintenance for minor issues ahead of time to reduce unplanned service interruptions in the shop.

Drivers are notified via their Zonar tablet or mobile phone once repairs are finished so they can get the vehicle moving sooner. EVIR integrates with your fleet maintenance platform for seamless data transfer and analysis.

### Quickly access inspection data.

- View inspection history anytime, anywhere through Zonar Ignition™.
- Receive instant alerts on the online dashboard if a driver skips an inspection or a critical defect is found.
- Easily filter for vehicles with severe open defects and prioritize them for maintenance.

## Ensure rental vehicles are inspected, too.

You may not want to permanently tag temporary assets—but they still need to be inspected. Drivers can use EVIR tagless inspection option in the EVIR app to properly inspect rental and leased assets, and upload the results using the same process as your tagged assets.

Same process. Same app. Same secure online portal. Same verified results.

### Verify inspections—no extra hardware required.

Even if you're locked into a contract with another provider, you can download the EVIR Mobile app to perform inspections. Most eDVIR systems require dongles, docks, or GPS units, making implementation complex and costly. The EVIR Mobile app is available directly from the app stores—no extra hardware necessary.
