guidance

Prevent
costly tows and
downtime

Maximize vehicle uptime.

Address problems sooner. Keep vehicles running longer.

The more efficiently you monitor vehicle health and performance, the longer each vehicle stays on the road. Zonar FaultIQ[®], powered by Noregon, monitors light-, medium- and heavy-duty vehicles across any make or model, calculating a health score for each based on its fault codes.

Everyone—from dispatchers to maintenance technicians—can easily understand the clear, expert guidance and detailed action plans Zonar FaultIQ[®] provides. Easier fault identification. Faster maintenance. More driver and vehicle uptime. [More on this.](#)

Improve safety and ensure CSA compliance.

Safety and compliance start with making sure each vehicle is safe to operate. A non-engine issue, such as a broken windshield wiper, won't keep the engine from running, but it can sideline the vehicle and lower CSA scores. In addition to a health score, Zonar FaultIQ calculates each vehicle's safety score so you can spot small issues that increase risk, reduce uptime and cause safety violations.

Monitor and manage your fleet efficiently.

Fleets often use multiple tools to track the health, performance and safety of their vehicles—but now you can use one platform. Consolidate all fault data into a single, simple view. Access streamlined reports and configure text or email alerts to stay ahead of maintenance needs. Easily find nearby service centers on the map if a vehicle requires repair while on the road.

Key Features

- Supports Class 1 through Class 8 vehicles
- Any make, model & component
- Customizable alerts
- Vehicle health scores
- Vehicle safety scores
- Fault severity levels
- Recommended action plans
- Zonar Ignition™
- 24/7/365, U.S.-based Customer Success support
