

**Ensure**  
U.S. ELD  
compliance

**Prevent**  
costly violations &  
driver OOS downtime

**Lower**  
CSA scores with  
compliance-  
driven data

**Simplify**  
HoS with an easy-  
to-use dashboard

## Built for drivers, backed by compliance experts.

### Avoid ELD violations with a proven solution.

Ensure compliance with ELD regulations across the U.S. Zonar Logs™, our Hours-of-Service driver app, helps drivers log more accurately and plan their trips more efficiently.

Proven, tested and trusted, Zonar Logs was informed by our own safety and compliance experts—each of whom has been on both sides of the roadside inspection and helped shape the regulations that govern your fleet.

#### Comply across the U.S.

- [Third-party validated](#) and self-certified with the U.S. Federal Motor Carrier Safety Administration (FMCSA) to meet U.S. ELD regulations
- Successfully completed [testing with the FMCSA](#) to confirm end-to-end data transfer to an authorized safety official's laptop via web services

- Meets title 49 CFR 395 ELD and HoS supporting documents
- Supports various rulesets and exemptions for U.S. intrastate, interstate and passenger carrying fleets
- Automatically updates with new and updated laws

### Prevent accidental violations.

Make it easier for drivers to comply and they'll make fewer costly mistakes.

The intuitive interface displays real-time clocks and at-risk notifications when they're nearing a violation. And, depending on your fleet policy, they can set special duty statuses such as yard moves and personal conveyance. They can also add exemptions and change rulesets as needed.

Live engine data is transmitted to the [Zonar V4™](#) telematics device.

Drivers enter their hours of service using Zonar Logs on their in-cab device.

Compliance managers view driver HoS and violations in [Zonar Ignition™](#).

### Update HoS anytime, anywhere.

Drivers use their email to log in to Zonar Driver Dashboard, an online portal, from their computer or mobile device. There, they easily manage their HoS logs remotely.

- Export and certify daily logs.
- Assign unidentified driving time.
- Set status as off-duty, on-duty, sleeper berth or driving.

### Smart in the cab.

Unlike most mobile phone solutions, Zonar Logs locks down when the vehicle is in motion to prevent in-cab distractions.

### Smart at roadside inspection.

Log certifications and built-in data transfers streamline inspections to minimize downtime and reduce the risk of accidental violations even further.

### Comply with the right rulesets.

To help you comply with the rules specific to your fleet, Zonar Logs supports the following (among others):

- Property-carrying 60/70-hour limits
- Passenger-carrying 60/70-hour limits
- Short-haul drivers
- Construction operations
- 16-hour “big day” exception
- California and Texas intrastate

### Remotely manage driver HoS with ease.

Driver Logs is an intuitive, efficient dashboard that makes Zonar Logs data available online through Zonar Ignition.

- Review driver logs.
- Suggest log edits.
- Assign unassigned driving time.

Also monitor live statuses, HoS violations, driver availability and special duty status usage.

### See who's available, now.

Plan trips based on real-time driver availability.

Access the Live Status map to see who's available, their current location, the direction they're driving, the vehicle they're operating, duty period and hours remaining in the rolling 7/8-day cycle. Even see who's at risk of a violation—and who's already earned one.

All in one comprehensive table.

### Spot trends and violations.

Identify how your fleet operates—and address ongoing violation patterns.

With one click, view:

- the number of fleet violations
- percentage of drivers in violation
- most common violation in a specified timeframe

Breaking down each violation highlights behaviors and trends, including rest breaks, daily driving, on-duty hours and weekly on-duty limits—all of which you can address as soon as you see the pattern.

### Keep drivers out of OOS.

Log on to see how many are currently in violation, so you can take immediate action to keep them from being placed out-of-service. Faster action for less downtime.

### Key features

- Automatic updates with new & updated laws
- Driver Dashboard
- Roadside View
- Compliance insights
- Approaching violation in-cab driver alerts
- Live Status map view
- Count per violations
- Unidentified driver logs
- 24/7/365 Zonar support
