

**Keep**

drivers moving &
dispatchers happy

**Eliminate**

radio chatter &
hardware costs

**Unify**

communications &
driver daily workflow

**Elevate**

safety with fewer
distractions & devices

Hear better. Do more. Be safer. With one platform.

Keep them moving with crystal clear communication.

Zello offers a comprehensive, voice-first communications platform, powered by its leading push-to-talk technology. Zonar ruggedized tablets host a mobile ecosystem of trusted, vetted third-party and Zonar apps that streamline driver workflows. Through this partnership, drivers use their Zonar tablet as an all-in-one mobile platform, which integrates Zello's app for clear, reliable communications.

Use the Zello app to turn your fleet's Zonar tablets into walkie-talkies. Eliminate radio chatter, reduce hardware costs, enhance efficiency, and help drivers operate more safely.

- Drivers talk to dispatch while staying focused on the road.
- Dispatchers communicate 1-to-1, 1-to-many, or 1-to-all for faster responses.
- Both sides hear only who they need to hear—each other.
- Service stays crystal clear almost regardless of location.

Keep dispatch and drivers connected with reliable, clear, instant communication. And equip dispatchers to support drivers more efficiently, even across distances.

Make them want to stay.

Professional tools attract talented professionals. So do operations that empower their people with modern technology. Clear, reliable communication tops every driver's and dispatcher's wish list.

- Drivers can communicate inside and outside the cab.
- Dispatchers can reach out to one driver or the whole fleet.
- No one misses any calls or messages.

Drivers will feel more supported with one-to-one dispatch help and better communication, as well as more connected to the team. As their morale goes up, so does their commitment to stay with your company longer.

Free them up to focus.

Clear communication is a cornerstone to well-oiled fleet operations. Relentless chatter and radio noise can get in the way of emergency calls, contribute to fatigue, and even cause safety issues.

Integrate Zello into your Zonar mobile ecosystem, so drivers and dispatchers can talk to each other whenever and wherever they need.

- Drivers can focus on driving safely.
- Dispatchers have more ways to reach drivers.
- Drivers can communicate even outside the cab.
- No more missed communications.
- Everyone has more confidence they'll be heard.

Dispatchers see a visual, shared queue of incoming calls so that they can share the labor and no call is missed. Record messages, track locations and send emergency alerts.

Plus, Dispatch Analytics helps optimize operations with insights into busiest times, as well as dispatcher response and resolution times.

Lower hardware costs.

Less hardware in the cab means less hardware to buy.

Outfit new and temporary drivers with a single, ruggedized Zonar tablet that's already configured with what they need, including the Zello app. No purchasing, storing or installing unreliable radios. Use the Zonar tablets you have.

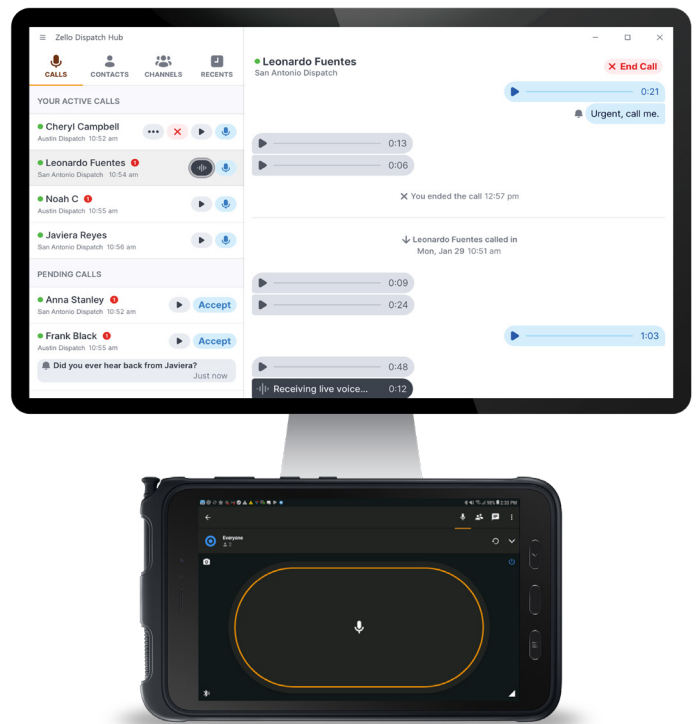

Plus, this integration costs a fraction of radio and carrier PTT costs—and delivers an uptime of 99.99 percent.

Take efficiency one app further.

Deploy Zonar MobileCommand™ to further streamline driver workflows. Unify their EVIR® inspections, HoS logging, Zonar digital forms and Zello push-to-talk communications onto a single app.

Key features

- Instant, live voice communication
- Smart call queue for dispatchers
- Message replay and history
- Unlimited, customizable channels
- Dispatch response time analytics
- Live location tracking and maps
- End-to-end encryption
- Uses Zonar tablets and SDK integrations
