ZONAR®

Safety starts and ends here.

Manage every run and protect every rider, more easily.

SO-PUP-20261030

Every base covered, and then some.

Start each day knowing your fleet has everything it needs to manage daily operations from one system, not several, all from a single provider. On smooth days and rough ones, keep routes, buses and drivers in sync and student riders safe.

Transporting students safely and on time is top priority, but never easy. For example, with rising fuel costs, 75% of districts struggling to hire and keep drivers, and nearly half saying limited staff is their biggest data challenge, the job keeps getting harder. Knowing your fleet in detail and managing daily operations from one system instead of many make it easier.

> Start with **Zonar Bus Suite**, the only unified transportation solution that combines routing, GPS, tracking, ridership, dependable hardware and a parent app that are all built in-house, giving you real-time fleet control and a single seasoned partner you can trust when the pressure hits. Plan and monitor every route live, and account for every rider from the time they get on the bus to the time they step off.

Partner with Zonar for the other solutions your district needs. Verify bus inspections are performed properly. Catch maintenance issues before the bus breaks down. And see exactly where your fuel dollars go so you can cut down on waste. Imagine it: Safer trips and vehicles, and a budget that stretches every penny further.

While you're at it, put parents at ease with clear communication for fewer anxious phone calls.

Round-the-clock support, on us.

All solutions are supported by our own team of customer support professionals, 24/7/365, including weekends and holidays. No charge. Because that's how we roll, and we think you should, too.

Connect and control, in one place.

All aboard, on time, with one unified system.

Tools and data from various vendors don't make the day run as smoothly as it could. Replacing your patchwork of systems with Zonar Bus Suite unifies routing, GPS, tracking, ridership and parent updates onto a single system, built in-house by a single provider.

- Plan, optimize and monitor every route and run live, from one screen.
- Spot a late or off-route bus early and act right away.
- Find any route, student, driver or stop in seconds to answer parent calls with confidence.
- Account for every student, from the pre-trip inspection to drop-off with Scanned, Manual, and Unassigned boarding statuses.
- Support your fleet's size and mix of vehicles as your operation evolves.
- Save costs with efficient routes and insights to right-size your fleet.
- Count on OEM-grade Zonar hardware with decades of proven reliability.
- Get turn-by-turn navigation and the parent app as standard, with no surprise add-ons.
- Plan and manage field trips and other one-off trips more efficiently and effectively.

Because everything works together, your team gets answers without jumping between screens. And when the pressure's on, you have one partner to call.

Create and optimize routes with ease.

Build routes from scratch or import existing routes from another provider. Fine-tune and update each one based on real-world performance data to cut unnecessary miles. All online, even at a moment's notice.

Act fast when plans change.

When a driver's out sick or a bus is in the shop, pick a substitute or split a route from the live map view. Drivers will pick up their new assignment when they log in.

Protect students from easy mistakes.

Set up a rider manifest for each stop so drivers know who gets on and who gets off. And rely on alerts so they don't end a trip while students are still marked on board.

Enhance peace of mind. Reduce phone calls.

Make the Zonar Bus Suite Parent app available so parents and guardians can (securely) track their child's school bus, in real time. Send arrival and delay alerts so they stay in the know, without calling your teams.

Keep drivers on track, every turn of the way.

Enable every driver of every experience level to arrive curbside, on time. Put turn-by-turn directions, automatic re-routing and two-way messaging on their tablets so they know where to go at all times. And can contact dispatch if they need.

Enhance student safety with today's technology.

Student ridership

Track student ridership across your fleet. Know who gets on and off, where and when. Set alerts if a student boards the wrong bus. And optimize routes with in-depth visibility into how each bus is deployed. And it comes standard, at no extra cost.

Child-check

Make sure no child is left on the bus. EVIR integrates with the Child Check-Mate System® to ensure every child check is performed. And alerts you if a bus fails a safety check.

Driver coaching

Enable drivers to self-correct unsafe behavior in the moment with incident detection and in-vehicle alerts. Also capture performance metrics and trip footage to review on demand. Review performance fairly based on data.

Dashcams for support vehicles

Add dashcams to white fleet, maintenance trucks, vans and other support vehicles. When there's an incident, review footage to coach safer driving and protect workers from false claims.

"We use [Zonar] as a tool to grow and advocate for our team. It represents how we prioritize the safety of our students and staff."

- Kyle Johnson,
Director of Logistics and Operations, Central Kitsap School District

Put parents at ease by keeping them in the know.

The Bus Suite Parent App enables clear, timely communication with parents and guardians. They track their child's bus and because everything updates automatically, they get set up with little to no effort.

Greater transparency for them. Fewer parent phone calls for you. And student data stays secure.

What can we help you solve for?

Unified transportation solution

Combine routing, GPS, tracking, ridership, dependable hardware and a parent app onto one system that's built in-house. Manage daily operations with real-time fleet control and a single seasoned partner you can trust when the pressure hits.

Verified inspections

Electronically verify that every pre- and post-trip inspection and child-check is performed properly. Integrate digital inspection results, repair and maintenance records. Available on tablets and smartphones.

Routing & student safety

Know where every bus is and who's on it, from the first stop to the last. Put routing, tracking and ridership in one system your team can count on, by one provider who supports it.

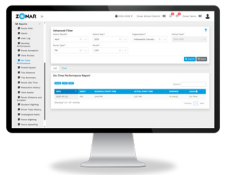

Fuel analytics

Find ways to run more efficiently on less fuel. Look at more than just MPG, such as idling, speeding, routing and driver habits. Reward efficient driving and save real money.

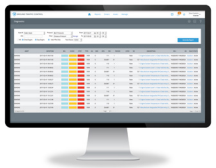

Vehicle & GPS tracking

Track each bus's location, performance and activity in real time. Our OEM-grade telematics unit is line-fit on Thomas Built Bus Saf-T-Liner®, Minotaur® and C2 Jouley™ buses. Pre-wired on IC Buses and Blue Bird.

Custom reports & alerts

Get the numbers your board asks for without the spreadsheet scramble. Pull reports on on-time performance, ridership and more, and set alerts so issues reach the right people right away.

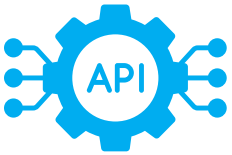

Diagnostics & predictive maintenance

Spot problems before buses end up on the side of the road. Access fleet health reports for data to maintain optimal fleet health. Also view fault codes and safety scores by severity, and expert analysis and recommendations.

Driver tablets

Give drivers one tablet with everything they need for their shift. Streamline daily tasks, including inspection, turn-by-turn navigation, and time & task management.

Open API & integrations

If you already have systems you love, let's connect them. Our open API lets your Zonar data flow into the tools your district already uses, so nothing gets entered twice.

Time & attendance

Manage employee hours online, on one platform. Control costs with deeper, more reliable insights. Eliminate paper timesheets and reduce schedule miscommunications.

Electronically verify every inspection.

Safeguard students with safer buses.

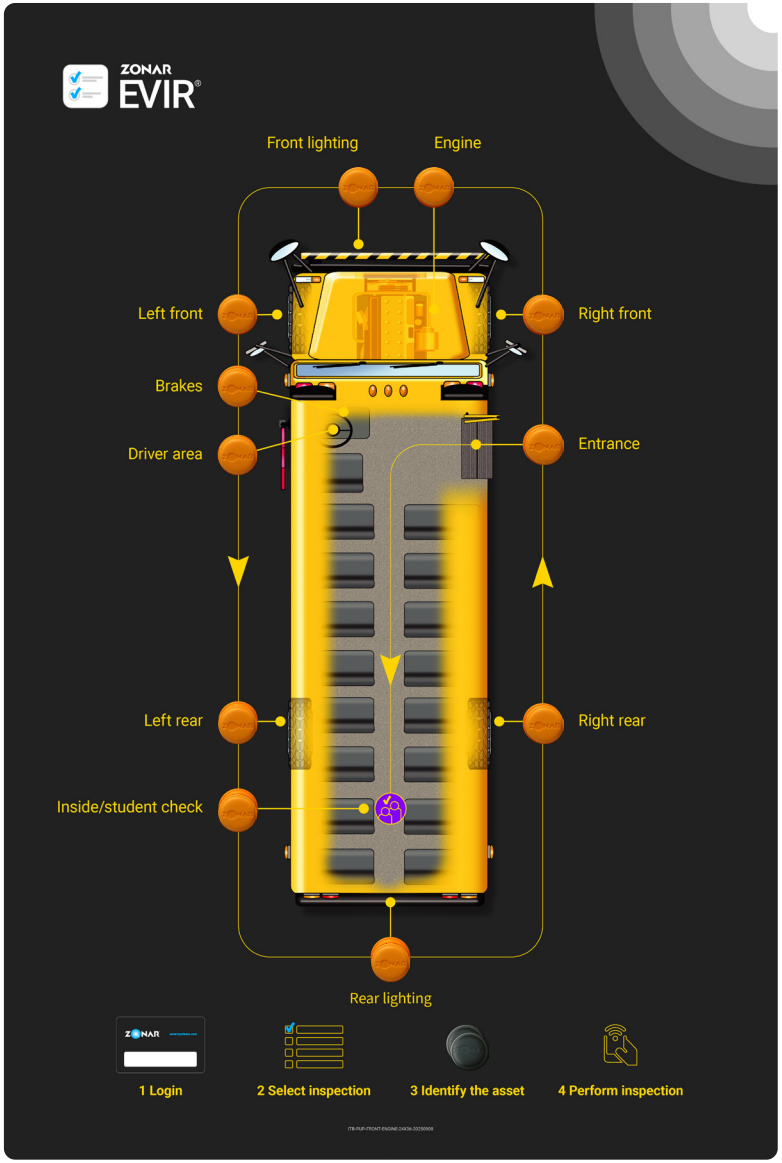

One pencil-whipped miss can cause a costly accident. Or leave a child stranded on the bus. Use our electronic verified inspection reporting (EVIR) system to make sure every inspection and child-check is performed correctly, and the results are captured accurately, every time.

- Place a Zonar tag on each inspection zone of the school bus.
- Drivers must physically scan each tag when they inspect that zone's components.
- As they perform the inspection, drivers mark defects, add notes and capture photos.
- When the inspection is complete, the results are uploaded to the Zonar fleet management platform.

Drivers can use the downloadable EVIR app on their tablets and smartphones. Available on the Google Play Store and Apple App Store.

Verify electric bus inspections, too.

EVIR features an inspection configuration tailored specifically for electric school buses. Use the same verified inspection process, plus ensure each electric bus is adequately charged for its route.

Prioritize proactive fleet health.

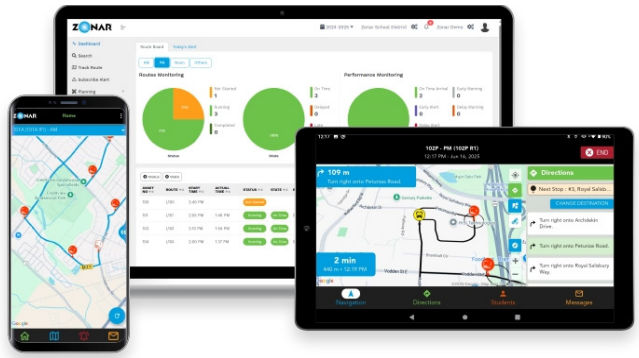

Manage mixed-fleet health in real time.

Zonar FaultIQ®, powered by Noregon, is an all make, all model, all component diagnostic software for medium- and heavy-duty vehicles, regardless of manufacturer. Understand each vehicle's overall health, not just its engine.

- See a snapshot of your entire fleet on a single dashboard.
- Monitor Health and Safety Scores for each vehicle, color-coded based on severity.
- Get ahead of breakdowns with predictive insights that flag issues before they sideline a bus.
- Trust recommended action plans based on input from ASE-certified technicians.

Link entire fleet to one system.

Many select IC Bus® vehicles already have a Zonar telematics control unit (TCU) installed. Use their all-makes advanced remote diagnostics solution, OnCommand® Connection, to access comprehensive diagnostic data pulled through the Zonar TCUs across your fleet.

Not installed? Not too late.

If you're buying a new IC Bus vehicle, Zonar technology can be factory fit or installed after-market with the Zonar pre-wire kit.

We can also provide a retrofit OEM hardware install on all IC Bus vehicles in your fleet.

Sourcewell

Zonar is a Sourcewell supplier.

How would it feel to get the fleet tech you need…but with all the benefits that come with cooperative purchasing instead of an RFP? Because Zonar is a Sourcewell contracted supplier, Sourcewell members have access to a catalog of our fleet management technology at lower cost. Plus, as a Zonar customer, you'll have access to our 24/7/365 customer support.

Trusted by industry leaders.

On board Thomas Built Buses.

Many Saf-T-Liner®, Minotaur® and C2 Jouley™ buses have already been line-fit with the Zonar V4 TCU. And when you purchase new, you have the option to have Zonar technology installed on the factory floor. That's OEM-grade hardware with decades of proven reliability and a lower total cost of ownership already on board when you get the keys.

Once your Thomas Built Buses vehicle already has a Zonar TCU on board, monitor and manage your Zonar-enabled buses through our smart fleet management platform. Track each vehicle's location, speed and idling, in real time, while it's on route. And access a full suite of Zonar services and reports, as well as real-time data on dozens of bus functions.

All at no additional cost.

More of what Blue Bird customers expect.

Blue Bird's commitment to safety, quality, durability and serviceability is unparalleled. Our partnership layers on native, insightful data sets for precision vehicle tracking and in-depth diagnostics to exceed the high standards Blue Bird customers expect.

Order our pre-wire kit for an OEM backbone installation on the factory floor that, when combined with the Zonar V4, delivers virtual I/O management. Or install aftermarket across your fleet for richer, wider-reaching insights.

Rich data for IC Bus®, delivered.

IC Bus is one of the most trusted student transportation brands there is. Our partnership delivers richer, deeper data so you can more efficiently monitor and manage your vehicles from the inside and out.

Factory fit, install aftermarket or OEM retrofit your IC Bus with the Zonar pre-wire kit. And add mixed fleet diagnostics monitoring with OnCommand Connection for greater operational efficiency across your fleet.

When IC Bus vehicles meet Zonar's comprehensive data, everyone wins. Greater efficiency, safety and uptime. You could get used to this.

About Zonar

Zonar combines fleet management solutions, professional services and 24/7/365 human support. Why? To give school transportation teams what they need to safely and reliably transport school children. For more than 25 years, districts and families have trusted us with their children's safety. Along the way, districts have cut transportation costs by $20 million and improved route efficiency by 18.5%. Contact us to learn more and get pricing.
