

Defend your fleet against false claims with video evidence.

Why service fleets are vulnerable to liability claims

Branded HVAC, plumbing and electrical vehicles sometimes attract the wrong kind of attention.

- They signal insurance coverage, making them appealing targets for fraudulent claims.
- They operate in residential and high-traffic environments where incidents can be staged or exaggerated.
- They frequently park in visible, accessible locations during service calls.
- They're often assumed to settle disputes quickly to avoid operational disruption.

How to identify risk and disputed incidents

False or misleading claims often follow recognizable patterns.

- Accidents with unclear or conflicting accounts of what happened.
- Property damage claims reported after a technician has left the site.
- Sudden accusations with little or no supporting evidence.
- Repeated claims in similar locations or circumstances.
- Delayed reporting that makes verification difficult.

What you need in a dashcam & telematics solution

See what happened before, during and after every incident with Zonar Coach™.

- See real-time, HD video of road and jobsite activity.
- Pinpoint exact vehicle location with satellite and GPS tracking.
- View speed, braking and vehicle performance data for full context.
- Watch event-triggered recording for critical safety moments.
- Access footage online quickly and securely at a moment's notice.
- Rely on AI-powered detection of risky driving behaviors to catch what matters.
- Coach drivers to improve and measure performance over time.
