

# Speed up inspections with electronic verified inspection reporting.

## Why paper inspections are so slow

Filling in paper forms (DVIR) takes time and impacts how quickly defects are repaired. An outdated approach that can't keep up anymore.

- Drivers and operators have to manually capture vehicle or asset information.
- Inspection forms are often lost, illegible, incomplete or forgotten.
- Physical paperwork must be physically turned in to appropriate personnel.
- Some drivers complete, sign and submit reports without performing a thorough inspection (pencil whipping).
- Maintenance can't schedule repairs until they receive the paperwork, and defects get worse.

## How to ensure faster, complete inspections

Replace DVIR with eDVIR. Same procedures, but using digital forms that take less time and leave less room for error.

- Have drivers and operators capture inspection data digitally and securely upload results for online review.
- Eliminate the possibility of lost, illegible or damaged paper forms.
- Standardize and streamline the inspection processes for all vehicles and assets.
- Enable them to capture and send photos directly to maintenance for clear communication.
- Maintenance can review and prioritize defects, and schedule repairs faster.
- Make communications more efficient for everyone involved.

## What you need in an electronic inspection system

Zonar EVIR® streamlines the process, increases accuracy, and is truly verifiable. Tag it. Scan it. Know it's done right.

- Reduce inspection time by up to 50% over paper inspections.
- Place a tag in each inspection zone.
- Drivers and operators scan the tags, perform the inspection, and upload the results for immediate online review.
- Vehicle or asset information is automatically uploaded to the report.
- Date and timestamps show if any part of the inspection was rushed or incomplete.
- No tracking down vehicle information, and no physical paperwork.
- Integrate with your maintenance platform so workorders are automatically generated.
